### Why create an app?

With BC summers getting hotter, film crews need information and resources to protect themselves from heat-related incidents.

### How does it work?

The app helps workers analyze their risk in specific working environments – and gives them heat stress results they can share with their direct supervisors and safety representatives.

To use the app, you need a hygrometer or sling psychrometer, required for worksite-specific temperature and relative humidity readings.

### What does it do?

The app uses a heat stress risk assessment method acceptable to WorkSafeBC to determine the potential for hazardous exposure to workers.

### Other sources

It is essential everyone learn the signs and symptoms as well as how to manage heat-related illnesses.

IATSE 891 recommends WorkSafeBC, Actsafe, the Canadian Centre for Occupational Health and Safety (CCOHS), and the BC Centre for Disease Control (BCCDC) as trusted sources.
