

WHY RENT FROM ACTSAFE?

Actsafesafe is presenting its members with an excellent chance to integrate an Automated External Defibrillator (AED) into their organization. This program centers around the Medtronic LIFEPAK CR Plus defibrillator, known for its rugged design and user-friendly interface. It's the ideal choice for both minimally trained first responders and seasoned professionals due to its advanced features. With low-cost maintenance, local servicing, and medical-grade components, this AED model is a perfect choice for Actsafesafe and its members.

This initiative ensures AED affordability for short-term and long-term projects in performing arts, live events, and the motion picture industry. Actsafesafe will supply the AED, orient your staff, and manage all necessary maintenance upon its return.

BENEFITS

Rental package includes:

- ✓ Either Alarmed Wall Cabinet or the Wall Bracket
- ✓ Extra set of replacement electrodes and battery pack
- ✓ Orientation of staff

In addition, in the event of a life-saving situation, Actsafesafe will handle maintenance, and replacement electrodes and batteries are provided at no extra cost.

SELECT YOUR PERFECT FIT

CR-PLUS

\$125 per month + tax

- AHA/ERC Guidelines 2005 consistent
- Fully-automatic
- Infant/Child Electrode capability

LIFEPAK CR PLUS AED

Physio-Control created the LIFEPAK CR Plus Automated External Defibrillator (AED) for the minimally trained rescuer. The LIFEPAK CR Plus AED can be used in any setting, whether it is in a public place or at home. The clear, calm voice prompts guide the rescuer one step at a time. The semi-automatic CR Plus requires just three steps to give a potentially lifesaving defibrillation shock, while the fully automatic CR Plus requires just two steps. The LIFEPAK CR Plus is easy to maintain with synchronized replacement for the battery and electrodes. Weekly and monthly self-tests plus the visible readiness display with four clear indicators let you know the AED is ready to do its job.

FEATURES

**AHA/ERC Guidelines
2005 consistent**

**Fully automatic configuration
allows user to focus on patient**

**Clear, calm voice guides
user one step at a time**

**Highly visible readiness
indicator**

**Infant/Child Electrode
capability**

**Lightweight, compact
and durable**

Simplified maintenance

**Compatible with EMS and
hospital technology**

**Soft carry case and extra set
of electrodes included.**

WHY DO YOU NEED AN AED?

When an AED and CPR are immediately available, the chance of survival from sudden cardiac arrest is substantially improved. Combined with CPR, the use of an AED may increase the likelihood of survival by 75% or more.

For every one minute delay in defibrillation, the survival rate of a cardiac arrest victim decreases by 7 to 10%. After more than 12 minutes of ventricular fibrillation, the survival rate is less than 5%. AEDs combined with CPR and activating emergency medical services offer the best chance of saving a life in the event of a cardiac arrest.

Research shows that AEDs are most effectively used by trained individuals. However, AEDs are safe and easy to use by almost anyone. In fact, there are studies showing that laypersons can use AEDs safely and effectively. There are also examples of cases where individuals with no training have successfully used an AED in an emergency situation as they are very straightforward to use and self-guiding.

Legislation in provinces across Canada protects individuals who use AEDs from liability when they are used in the context of saving a life.

Anybody can use an AED machine however all levels of occupational first aid training include instruction on the care and use of AEDs. An additional orientation can be achieved by having workers view the short 20 minute orientation and training video that is included with every Medtronic LIFEPAK CR Plus defibrillator.
